

G. Muschiolik (Editor)

Multiple Emulsions

- Preparation and Properties -

2nd Edition 2022 (in German), Behr's Verlag Hamburg

648 pages

Content (detailed content see German site)

- 1 Double and multiple Emulsions – preparation, properties and application**
G. Muschiolik
 - 1.1 Remarks
 - 1.2 Typs of multiple emulsions
 - 1.3 Preparation of W/O/W systems by two-step-method
 - 1.4 Uses of double and multiple emulsions
 - 1.5 Selection of raw material
 - 1.6 Double emulsions as encapsulation media
 - 1.7 Summary

- 2 Procedures and techniques to prepare multiple and double emulsions**
G. Muschiolik, I. Scherze
 - 2.1 Methods of dispersing**
 - 2.1.1 Two-step-procedures to prepare double emulsions, preparation of W_1/O -phase
 - 2.1.2 Dispersing methods for W_1/O -Phase in W_2 -phase
 - 2.1.3 Summary

 - 2.2 Emulsion and doplet formation with low energy input**
 - 2.2.1 Glass and ceramic membranes
 - 2.2.2 Nickel-Membranes
 - 2.2.3 Other membrane types
 - 2.2.4 Methods to increase the dispersing effects of membranes
 - 2.2.5 Nickel-Microsieve with packed layer of glass beads
 - 2.2.6 Summary

 - 2.3 Double and multiple emulsions with defined single droplets, microfluidic devices**
 - 2.3.1 Microchannels
 - 2.3.2 Microchannel systems, T-, Y- and Ψ -Junction
 - 2.3.3 Capillary devices
 - 2.3.4 Preparation of microcapsules with cross-shaped micromolds
 - 2.3.5 Summary

 - 2.4 Preparation of W/O-phase, traditional method of dispersing**
 - 2.4.1 Influence of emulsification methods on lecithin stabilized W/O-emulsions
 - 2.4.2 W/O-Emulsions with PGPR
 - 2.4.3 Dispersing W_1 -phase into W_2 -phase
 - 2.4.4 Summary

 - 2.5 Laboratory-scale device for the preparation of multiple emulsions, rotating sintered glass tube**
U. Bindrich
 - 2.5.1 Remarks
 - 2.5.2 Emulsion formation
 - 2.5.3 Parameter of device and emulsification

- 2.5.4 Properties of double emulsions
- 2.5.5 Summary

3 Emulsifiers for the formation of multiple emulsions

A. Knoth, I. Scherze, A. Fechner

- 3.1 Emulsifiers for W_1/O
- 3.2 Biopolymers and emulsifiers in W_1/O and W_2 , product development

4 Modifying the properties of double emulsions

4.1 Interaction between proteins and polysaccharides, surface stability

M. Gruschwitz, G. Muschiolik

- 4.1.1 Preparation of protein-polysaccharide-complexes
- 4.1.2 Incompatibility between biopolymers
- 4.1.3 Stabilisation of emulsions with complexes
- 4.1.4 Complexation in aqueous systems
- 4.1.5 Protein-polysaccharide-interaction in emulsions, acidic $W/O/W$ -systems
- 4.1.6 Use of protein-polysaccharid-interactions to stabilize emulsions
- 4.1.7 Particles, complexes und conjugates as surface stabilizer (Pickering-stabilisation)
- 4.1.8 Summary

4.2 Einfluss der O-Phase auf die Emulsionseigenschaften

J. Pflipsen, G. Muschiolik

- 4.2.1 Influence of the O-phase (oils, fats) on emulsion properties (consistency, release of substances)
- 4.2.2 Influence on yield (encapsulation efficiency) of W_1 -phase
- 4.2.3 Polarity, composition and surface activity of lipid phases, basics
- 4.2.4 Effect of O-phase on rheological properties
- 4.2.5 Influence of cooling conditions on barrier effect
- 4.2.6 Crystall size and morphology
- 4.2.7 Effect of crystall modifications
- 4.2.8 Storage of $W/O/W$ -emulsions with crystalline O-phase, barrier effect
- 4.2.9 Effect polymorphic lipid phases
- 4.2.10 Conclusions
- 4.2.11 Summary

4.3 Double emulsions with reduced water content (product development)

P. Preissler, G. Muschiolik

- 4.3.1 Introduction
- 4.3.2 Composition of double emulsions
- 4.3.3 Preparation
- 4.3.4 Properties
- 4.3.5 Particle size of droplets
- 4.3.6 Water activity
- 4.3.7 Influence of osmotic gradient
- 4.3.8 New literature
- 4.3.9 Summary

4.4 Double emulsions in pudding (product development)

K. Kobow, G. Muschiolik

- 4.4.1 Introduction
- 4.4.2 Osmolality of ingredients, commercial pudding and W -phases
- 4.4.3 Preparation
- 4.4.4 Properties of pudding with double emulsion

4.4.5 Effect on sensory (taste)

4.4.6 Summary

Literature (Chapter 1–4)

5 Double emulsions for pharmaceutical application

5.1 Double emulsions in pharmacy

H. Bunjes

5.1.1 Introduction

5.1.2 Topical application

5.1.3 Systemic application

5.1.4 Intermediate for other formulations

5.1.5 Summary

Literature

5.1.6 Remarks to progress in pharmacy regarding double emulsions since 2006

G. Muschiolik

5.2 Tensid-free double emulsions as drug delivery systems – Development, preparation, and characterization

J. Wengst, R. Daniels

5.2.1 Introduction

5.2.2 Preparation

5.2.3 Stability

5.2.4 Encapsulation of drugs

5.2.5 Summary

Literature

6 Image analysis for determining the yield of the W_1 -phase in double emulsions

R. Knöfel

6.1 Types of problem

6.2 Image recording

6.3 Analysis of the appearances of W_1/O -droplets

6.4 Analysis of the appearances of W_1 in dispersed O-phase

6.5 Validation of methods

6.6 Summary

Literature

7 Appendix

7.1 Composition and preparation of multiple emulsions

7.2 Devices for the preparation of double emulsions

7.3 Abbreviations
